

MARKETING CAMPAIGN ANALYSIS REPORT

Sales Performance · Customer Segmentation · Product Insights

Report Date: April 26, 2026

\$1.36M	2,240	\$605.80	50.2%
Total Revenue	Customers	Avg. Revenue	Wines Share

Executive Summary

This report presents a comprehensive analysis of a marketing campaign dataset covering **2,240 customers** across income segments. The pipeline included data cleaning, exploratory analysis, statistical modelling, and visual storytelling to surface actionable business opportunities. Key findings confirm a strong income–spending correlation, dominant product preferences, and clear regional revenue stratification.

Dataset at a Glance

Attribute	Value
Total Records	2,240
Total Features	43 columns
Missing Values	Handled via imputation
Duplicates Removed	Yes — clean dataset
Income Segments	3 (High / Mid / Low)
Product Categories	6 (Wines, Meat, Gold, Fish, Sweet, Fruits)
Analysis Date	April 26, 2026

Regional Performance Analysis

Revenue is highly stratified by income region. The **High Income** segment contributes **56% of total revenue** despite comprising only 25% of the customer base, indicating significantly higher per-customer value.

Figure 1 — Total revenue by income region (USD)

Region	Customers	Total Revenue	Avg. Spend	Revenue Share
High Income	560 (25%)	\$760,039	\$1,357.21	56.0%
Mid Income	1,120 (50%)	\$496,153	\$442.99	36.6%
Low Income	560 (25%)	\$100,796	\$81.93	7.4%
TOTAL	2,240	\$1,356,988	\$605.80	100%

Key Regional Finding

High Income customers spend 16.6x more than Low Income customers. With only 560 customers in the top tier generating \$760K, this segment offers the highest ROI for targeted marketing. Mid Income customers (50% of base) still contribute \$496K — a meaningful growth lever if average spend can be lifted even modestly.

Product Category Analysis

Wines dominate the product mix with a majority revenue share. Understanding category concentration enables better inventory planning and targeted cross-sell strategies.

Figure 2 — Revenue share by product (left) · Avg. spend by income segment (right)

Product	Revenue	Market Share	Segment Affinity
Wines	\$680,816	50.2%	High Income ★★★
Meat Products	\$373,968	27.6%	High & Mid Income ★★
Gold Products	\$98,609	7.3%	High Income ★★★
Fish Products	\$84,835	6.3%	Mid Income ★★
Sweet Products	\$61,480	4.5%	All Segments ★
Fruits	\$57,280	4.2%	Mid & Low Income ★

Income–Spending Correlation

A Pearson correlation coefficient of $r = 0.665$ confirms a strong positive relationship between customer income and total spending. This validates income as a reliable segmentation variable and supports premium pricing strategies for high-income cohorts.

Key Insights & Findings

01

Regional Revenue Stratification

High Income customers (25% of base) generate 56% of total revenue. The per-customer value gap between High and Low Income is 16.6x, making segment-specific campaigns critical for ROI.

02

Wines Category Dominance

Wines account for \$680,816 — half of all product sales. No other category exceeds 28%, highlighting both a strength to double down on and a concentration risk to mitigate.

03

Strong Income–Spend Correlation ($r = 0.665$)

Income is an effective proxy for purchasing power. Segmented pricing and premium bundles would resonate strongly with High Income customers based on this finding.

04

Mid-Income Growth Opportunity

With 1,120 customers averaging \$443 spend, the Mid Income cohort is the largest. A 20% spend lift would unlock ~\$99K in incremental revenue without acquiring new customers.

Strategic Recommendations

R1

Concentrate Marketing Spend on High Income

Reallocate campaign budgets toward the High Income segment using premium digital channels and personalised outreach to maximise lifetime value from this high-value cohort.

R2

Develop Premium Wine Variants

Leverage the 50.2% wine revenue share with curated premium lines, subscription bundles, or exclusive vintages. Pair with tasting events for top-tier customers.

R3

Grow the Mid-Income Segment

Design mid-tier value propositions and loyalty programmes. Even a modest spend uplift has outsized revenue impact given the large 1,120-customer cohort size.

R4

Personalised Multi-Channel Campaigns

Use income-based segmentation to tailor messaging, creative, and channel mix. Email automation, social retargeting, and in-store offers should be differentiated by segment.

Conclusions

This analysis demonstrates that **income level is the primary driver of customer spending behaviour**, with a correlation of 0.665 and a 16.6x spending ratio between top and bottom tiers. The **Wines** category is a clear market leader at 50.2% revenue share, representing both a core asset and an opportunity for premium extension. The Mid-Income segment, while lower in per-customer value, offers the largest volume-based growth opportunity. Targeted, data-driven campaigns aligned to these findings are projected to meaningfully improve revenue efficiency and customer lifetime value across all segments.

Total Revenue	Customers	Wines Share	Correlation
\$1,356,988	2,240	50.2%	r = 0.665
